

Rectangular, Square and  
Circular Steel Hollow Sections

# Profile

Located at Jamshedpur, Tata Steel Ltd. was established in 1907 and was the first Integrated Steel Plant in India. It commenced its operations in 1911, with a capacity of 1,00,000 tonnes per annum of ingots and expanded to a million tonnes per annum of saleable steel by the mid fifties.

Presently it has an annual capacity of 10 million tonnes at its Jamshedpur Plant. The plant, equipped with the latest steel making facilities such as Basic Oxygen Furnaces, Vacuum Degassing and Continuous Casting Units, presents the very epitome of technological advancement. A whole range of steels addressing the needs of the construction, engineering and automotive sector, testify to Tata Steel's capability in steel making. These products have found acceptance not only in the domestic market but all over the world.

Tata Steel Plant, Jamshedpur

# Tata Steel-Tubes SBU

Tata Steel - Tubes SBU is the outcome of the merger between Indian Tube Company with Tata Steel in 1985. Tubes SBU today is a leading manufacturer of welded pipes in the country having an installed capacity of over 4,50,000 MT per annum.

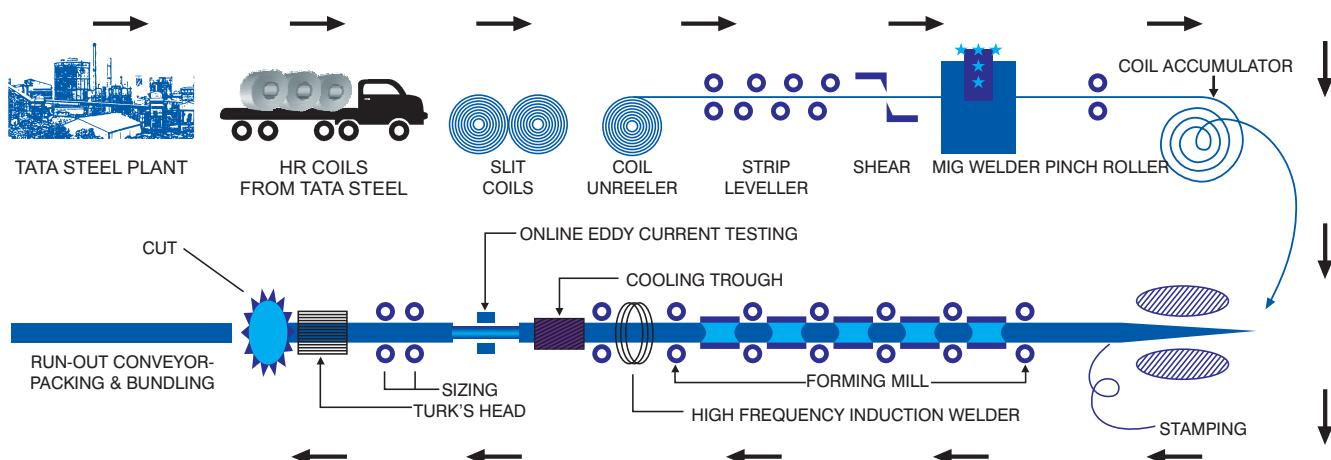

Currently, Tubes SBU manufactures Structural, Conveyance, Automotive and Boiler Tubes at its plant in Jamshedpur and some external processing agents (EPA).

Tubes SBU manufactures Structural Tubes under the brand name **Tata Structura**. **Tata Structura** is manufactured conforming to **IS:4923** and **IS:1161** standards for square, rectangular and circular sections respectively. **Tata Structura** can be manufactured up to a maximum size of 250X250 mm for square sections, 300X200 mm for rectangular sections and 300 mm NB for circular sections. The thickness can vary from 2 mm to 10 mm. **Tata Structura** has recently forayed into retail space under the initiative **Tata Structura World**, providing consumers with 360 degree solutions right from the design to the fabrication stage. Adding to the product portfolio as well as catering to the changing consumer demands, **Tata Structura** has started manufacturing GP/GI tubes in NB ranging from 20 mm to 50 mm with thickness varying between 1.4 mm to 2 mm.

**Tata Structura** has multiple applications ranging from architectural, industrial, infrastructural, general engineering to power plants, solar power plants, steel industry, railways etc.

## The Process

Control Room for On-line Non Destructive Testing

## Quality Control

The quality of our product is controlled during the manufacturing process. It starts with slitting the strip edges, continues with speed, temperature control during the high frequency induction welding and is followed by online non destructive eddy current testing directly after welding. Off-line, drift and flattening tests are conducted. This is all within our ISO 9000 quality management system.

# Advantages of Tata Structura Steel Hollow Sections

- The excellent distribution of material around the axis of these steel hollow sections allows for remarkable strength qualities and thus offers decisive advantages as regards to application technology.
- Their higher strength to weight ratio could result in upto 30% savings in steel.

## The 5Cs of Tata Structura

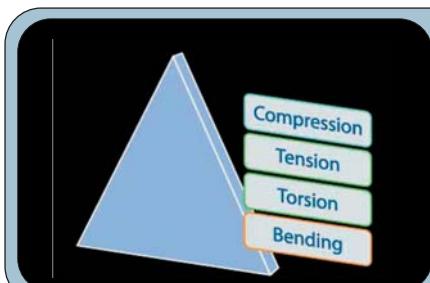

### Cost Effective

- By virtue of its shape, Hollow sections have high Radius of Gyration and other properties resulting in savings in Material, Transportation and Fabrication cost.
- Less Surface area compared to equivalent conventional sections results in savings in Paint and Labour cost.

### Corrosion Resistant

- Less exposed surface area combined with superior quality raw material results in less corrosion.
- Smooth uniform profiles of sections minimizes dust and moisture accumulation.

### Concentric Strength

- By virtue of its shape, Hollow sections have high Radius of Gyration resulting in higher concentric strength.
- Due to closeness of the section there will be higher torsional rigidity compared to conventional sections.
- Better lateral stability and lower wind drag.
- Enables weight reduction of upto 30%.

### Convenience of Fabrication

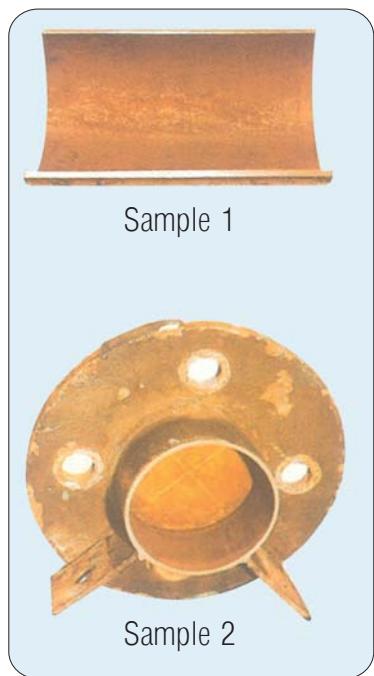

- Due to less weight and smoother profile, fabrication is easier.
- Also minimum use of gusset plates expedites the fabrication process.

### Creativity

- Due to higher torsional rigidity and better moment resistance on both the axis, bending of hollow section is easier compared to open sections. This gives flexibility to the architects to shape their structures and express their creativity.
- Smooth profile of Tata Structura enhances the aesthetic appeal of the structures.
- Most suitable for usage in exposed environment.

# Internal Corrosion - A Case Study

**Objective:** Identify the possibility of corrosion in the internal surface of steel hollow sections

**Details of the study conducted:**

Two of the original 'Tubewrights' erected in 1954 at Stamford Bridge, Chelsea were replaced in 1975, taken down and the used sections were cut and despatched to the Corby Works of British Steel for examination.

**Sample No. 1** of the 139.7 mm o.d. CHS was cut lengthwise to expose the internal surfaces for examination. Little evidence of internal corrosion was found other than a discolouration of the surface caused by the oxygen and moisture in the entrapped air, much of the original mill scale was still visible. A light rust in the centre of the sample developed after the tube was cut open for examination.

**Sample No. 2** of the 139.7 mm o.d. CHS incorporating an intermediate flanged joint was examined and the condition of the internal flange face, which had been enclosed and thus hermetically sealed by welding to the CHS, was still comparatively bright, with the original marking-off lines clearly visible.

**Outcome & Recommendation:** All the free ends of the steel hollow sections should be properly sealed by welding end plates.

**Source:** The above report is from British Steel Publication No. TD 347/10E/91 titled – CORROSION, THE CASE FOR STRUCTURAL HOLLOW SECTIONS.

## Applications of Tata Structura

The applications of Tata Structura has been classified under the following segments:

- **Architectural**
- **Infrastructural**
- **Industrial**
- **General Engineering**

## Applications

- Shopping Malls
- Canopies/Atrium
- Glass Curtain Wall Frames
- Partition Frames
- Space Frames
- Guard Rails & Staircases

## Attributes

- Lightweight
- Flexible and easy to form shapes
- Smooth surface finish
- Appealing aesthetics
- Contemporary

# Architectural

Edassery Kayal Resorts, Kumarakom

Palakunnu Bhagavathi Temple, Kasargod

Infosys, Pune

The Charkha, Mumbai

Mumbai Airport

# Infrastructural

## Applications

- Airport Terminal Buildings
- Bridges
- Bus Stands
- Sign Supporting Structures
- Pedestrian Walkovers (Footbridge)
- Sports Galleries
- Railways Platforms / Foot Over Bridges

Railway Platform Shed, Krishnanagar

Commonwealth Games Village, Delhi

## Attributes

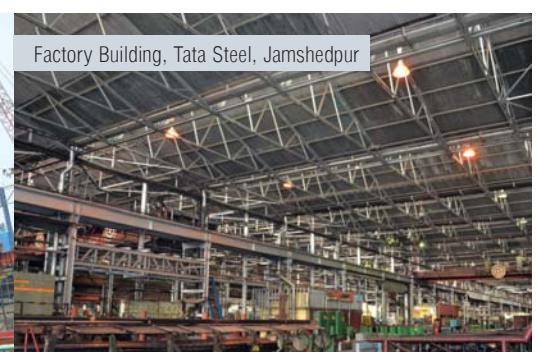

- High strength
- More column free space
- Larger & thicker sections
- Ease of fabrication
- Lightweight

Footbridge Connector, iGATE Campus

## Industrial

## Applications

- Industrial Sheds
- Trusses, Columns and Purlins
- Material Storage Racks
- Mine Roof Support Systems (cogs, props)
- Pallets
- Pipe Racks
- Conveyor Gantry, Trestles
- Drilling Rigs
- Steel & Power Plants

## Attributes

- High strength to weight ratio
- Cost effective
- Ease of fabrication and erection
- Ease of maintenance
- Free from sharp edges

# General Engineering

## Applications

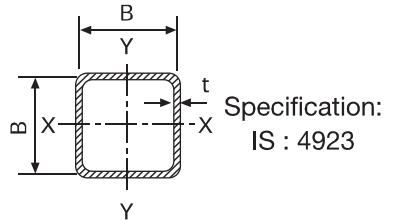

- Automobile Chassis
- Greenhouse Structures
- Truck & Bus Body Members
- Hoarding Structures
- Amusement Park & Playground Equipment
- Exhibition Stalls
- Scaffolding
- Furniture
- Solar Power Plant Structures

## Attributes

- Lightweight
- Ease of fabrication
- High torsional resistance
- Minimal painting area
- Appealing aesthetics

# Section Properties

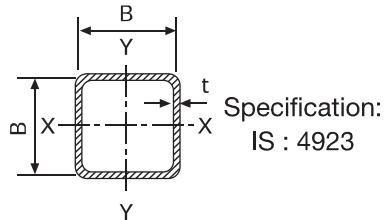

## Properties of Tata Structura (Square Hollow Sections)

\* YST 210 and YST 240 are also manufactured

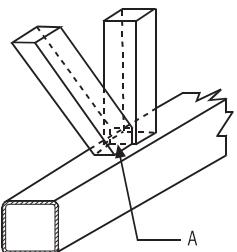

\* Galvanized sections can also be manufactured

|   |   |
|---|---|
| <b>Length</b>                               | 6.0 m $\pm$ 0.05 m Customized length ranging from 6 m to 11 m may be supplied.  |
| <b>Straightness</b>                         | Minimum 1 : 200 <sup>th</sup> of any length measured along the centre line (mill straightened condition) unless otherwise specifically arranged.  |
| <b>Twist Tolerance</b>                      | Maximum 2 mm $\pm$ 0.05 mm/m length-measured relative vertical shift of any adjacent corner of the section, measured by keeping one side on flat surface.   |
| <b>End Finish</b>                           | Plain ended-Mechanically sheared, mill-cut finish without further machining.  |
| <b>Surface Finish / Chemical Properties</b> | Black without any surface treatment of oiling or varnishing.  |
| <b>Raw Material</b>                         | Sulphur content : 0.05% max, phosphorus content : 0.05% max, equivalent carbon percentage well within specified weldability limits with matching physical properties. For corrosion resistant steel in Cu-bearing variety, refer to the WRS section of this brochure. |
| <b>Weldability</b>                          | Tata Structura Steel Hollow Sections are weldable with standard M.S. Electrodes without any pre-heating.  |
| <b>Packing</b>                              | Bundled by sealing metal strap and each bundle is labelled for size, measurement, lot number etc. Approximate weight of each bundle is 1.5 Mt (+/-500 kg).  |
| <b>Identification</b>                       | Marking of 'TATA STRUCTURA' emblem on surface, punched/stenciled/sticker pasted, on all Steel Hollow Sections. Standard BIS mark is also put on the sections.   |
| <b>Note</b>                                 | Tata Structura Hollow Sections in customized size, grade, length, surface finish and end finish may be delivered as per agreed supply conditions.   |

\*Conditions apply.

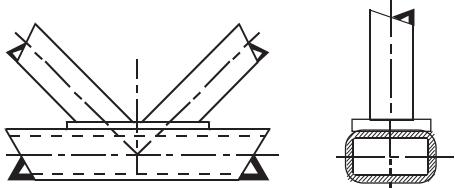

# Fabrication and Connection Details

## OVERLAP JOINTS

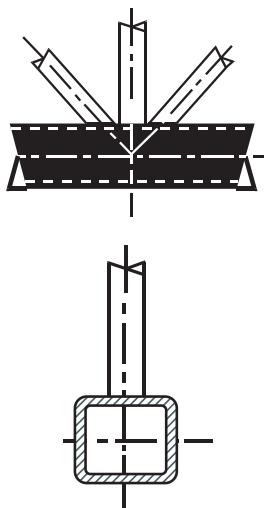

The weld seam 'A' can be omitted without affecting the behaviour of the joint.

## POSSIBLE REINFORCEMENTS

In certain cases reinforced joints are preferred for improved joint rigidity.

## GAP JOINTS

This arrangement is often the simplest and most economical and the joints are sufficiently strong. Joining member alignments should be at  $> 30^\circ$  with respect to the other.

## Jointing : Workshop & Site Practice

### CUTTING

Tata Structura Steel Hollow Sections can be cut:

- By means of a heavy duty circular/hand saw
- By flame cutting: either manual or automatic
- The path of the cut can be marked directly on the surface of the section or on a template after shop layout
- For section thicknesses of 5 mm and above, edges may be chamfered for proper welding penetration

### BENDING

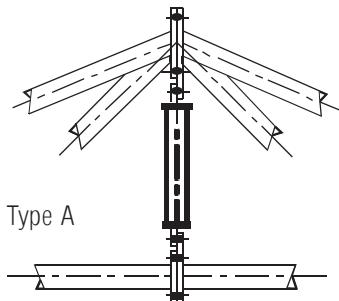

- Axial cold bending of Tata Structura Steel Hollow Sections is possible by using an internal mandrel and the roller must be adapted to the shape and size of the section
- Three roll bending machine may be adapted - bend by slow multiple pass, through trial and error method
- Thicker or larger sections are recommended to be preheated in a normalising furnace before bending in hot condition for better formation

## Jointing : Workshop & Site Practice

### WELDING

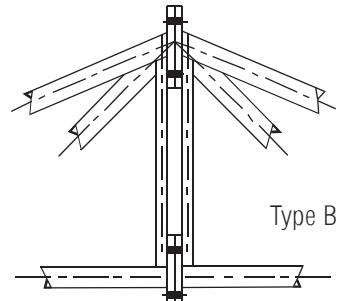

Technique in principle is similar for that of conventional sections. Follow relevant BIS code of practice and design conditions.

- **Electrodes:** Low hydrogen electrodes are suggested for use.
- **Butt welds:** The throat thickness of the seam:
  - a) Wall thickness of the section when joining members are of equal thickness, b) Wall thickness of thinner section, If thicknesses are different. Backing strip may be provided to ensure total root penetration in case of thicker section design size.
- **Fillet welds:** Various types may be provided. Size of the fillet is guided by the throat thickness as explained above.
- **NOTE:** All free ends of Tata Structure Steel Hollow Sections should be sealed properly by welding, to prevent internal corrosion.
- Normal M. S. electrodes of reputed brands are recommended. Moisture from electrode should be removed by baking before welding.
- **Sequence:** Edges are to be tack welded to maintain uniform gap during welding to minimise residual stress:
  - Transverse weld before longitudinal one
  - Fillet weld following butt weld
  - Starting from inside to outwards.

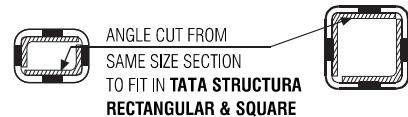

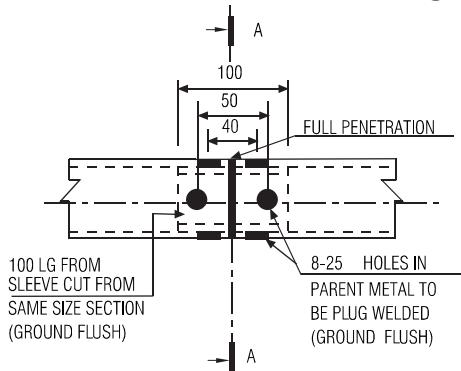

## BOLTED RIDGE DETAILS & TIE CONNECTIONS

Bolted connections as shown (Type A & Type B) are adopted by using single or double sag ties respectively.

## TYPICAL SPLICING DETAIL

**SEC - A - A**

The internal backing sleeve fulfils two functions; it facilitates the proper alignment of the parts and acts as backing strip for butt weld.

For more technical information, visit our website [www.tatastructura.com](http://www.tatastructura.com) or contact us for Designer Handbook.

## Jointing : Workshop & Site Practice

### CORRECTING DISTORTIONS

Post weld distortions, despite precautions, can be corrected by cold bending, hammering of the welds or by applying controlled local compensating heating on opposite sides. It is imperative to avoid excessive thermo-mechanical operation.

### BOLTED/RIVETED CONNECTIONS

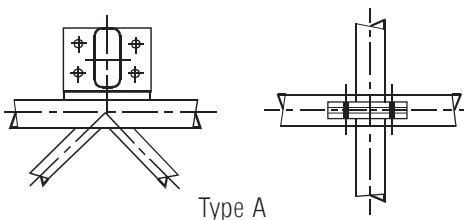

- Fasteners should conform to relevant BIS specifications and arrangements should be adequate to withstand combination of design loads at joints and to facilitate ease of fixing,
- As internal surfaces of Tata Structura Steel Hollow Sections are inaccessible, they are adaptable to:
  - Special structural fittings for indirect external bolting
  - Blind bolts
  - Self threading bolts, etc.

### ERECTION

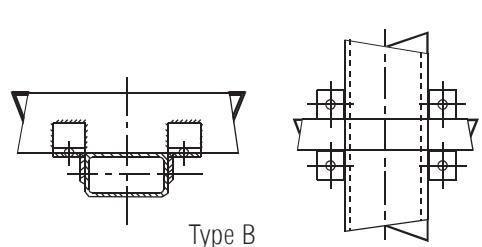

- In principle similar techniques are adopted as those for conventional section assemblies.

For hoisting and handling no additional stiffeners are required due to high torsional rigidity of Tata Structura Steel Hollow Sections.

## PURLIN CONNECTIONS

Purlin becomes very efficient with Tata Structura Rectangular & Square Steel Hollow Sections because of its lateral rigidity to avoid intermediate sag rods. The connection shown (Type A & Type B) can provide end - fixity.
